

How much does it cost to visit a website from a cell phone ?

Data cost calculator

When a person visits a website from a cell phone he/she pays the "data tariff" - i.e. for the amount of data downloaded; he/she does not pay cellular call tariffs. For regular users the monthly bill is +-R10 per month (that is if you view 20 mobile webpages [with small pictures] every day of the month).

Variables to change

| | |
|----------------------------|------|
| Cost per MegaByte (Rand) | 1.50 |
| Number of Users | 1 |
| KiloBytes per Transaction | 10 |
| No of pages viewed per day | 20 |

Cost is between **R2** and **R0,20** depending on contract / prepaid tariff and negotiations with Network and/or Service provider

Our experience has shown each transaction is not more than 1,5kb ; only change if photos are also viewed.

| | Megabyte per day | Cost per day | Total Cost to Client Per Month (R) | Total Cost Per user Per Month (R) |
|------------------|------------------|--------------|------------------------------------|-----------------------------------|
| KiloByte per day | 200 | 0.20 | 0.29 | 8.79 |
| | | | 8.79 | 8.79 |
